10 ml

The uncomplicated repetitive pipette for complicated liquids

#### BRAND. For lab. For life.®

- + High viscosity, high density, high vapor pressure no problem, thanks to the positive displacement principle
- + Compatible with BRAND PD-Tips and other positive displacement tips
- + Robust, stable and functional

# Get to know the HandyStep® S

The HandyStep® S repetitive pipette combines the application advantages of the positive displacement principle with easy operation, robust design and an attractive price-to-performance ratio.

Thanks to the positive displacement principle, the HandyStep<sup>®</sup> *S* is often the easy solution for liquids that are difficult to pipette. This includes highly viscous or wetting media, high density media, foaming media such as detergents or highly volatile liquids.

Its balanced weight distribution and the practical ergonomic positioning of operating elements makes work more efficient, even when pipetting long series. The ergonomic finger rest relieves strain on the hand, the positioning of the dispensing lever is easy on the thumb, and the stroke can be set with one hand, even while wearing gloves. Tips can be ejected with the press of a button, without having to touch the tips, making tip ejection contamination-free.

The HandyStep<sup>®</sup> S repetitive pipette works with the original BRAND PD-Tips *II*. Tips from many other manufacturers can also be used, providing maximum flexibility.

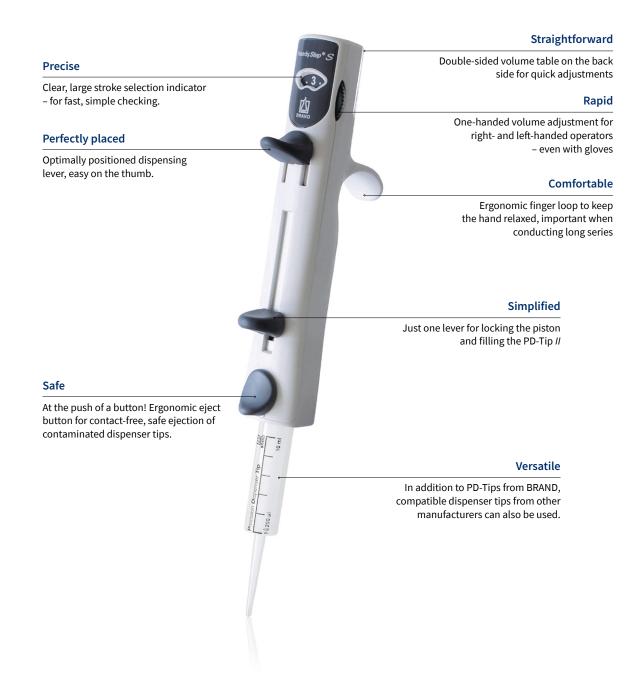

The simple, robust design and purely mechanical, battery-free operation make the HandyStep<sup>®</sup> *S* a reliable lab partner. Discover the application possibilities of the HandyStep<sup>®</sup> *S*.

- + Volume range from 2 μl to 5 ml
- + Adjustable to 59 volumes and up to 49 dispensing steps
- + Weighs just 108 g
- + Easy tip connection simply insert the PD-Tip

### At a glance: Advantages of the HandyStep $^{\circ}S$

The HandyStep<sup>®</sup> S is a robust repetitive pipette that uses the positive displacement principle. With the PD-Tips, the HandyStep<sup>®</sup> S covers a wide volume range from 2  $\mu$ l to 5 ml and can be used in many different applications, including diagnostics, molecular biology and environmental analysis.

## Volume table HandyStep<sup>®</sup> S with PD-Tips *II*

Offers 59 different partial volumes with different numbers of dispensing steps, depending on the PD-Tip size and stroke setting number used.

| Tip size (ml) |     |     |     |       |     |     |      |      |      |      |       |

#### **Accuracy Table**

The measurements were carried out with BRAND PD-Tips *II*. Distilled water was used as the test liquid. The nominal volume is the maximum volume printed on the PD-Tip. The tolerances specified in ISO 8655 are not exceeded.
